

# Build Your Personalized Pluripotent Stem Cell Bank with BetaLife

Bank your cells with BetaLife now while they're youngest and healthiest, so you have a **personal, renewable** cell source ready for tomorrow's medicine.

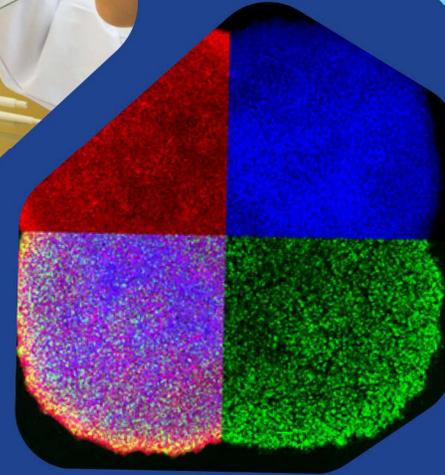

From one simple blood draw, our state-of-the-art facility creates your very own **induced pluripotent stem cells (iPSCs)** safeguarded by strict quality checks and backed by over a decade of experience in iPSC technology. It is an action taken today, and a smart hedge for your future health.

## Power of iPSCs

iPSCs are unique, **embryonic-like stem cells** that are created from your own mature cells. They can transform into **any cell type** to support precision medicine for diseases such as diabetes, cancer, eye diseases and neurological diseases.

Having **your own iPSC banks** eliminates immune rejection risks in future. The cell bank also enables drug testing tailored to your biology, future-proofing your health.

Stem Cell Therapy  
A Better Life For Diabetes

## Why does it matter to you?

Your own iPSCs are 100% genetically identical to you

Once banked, your iPSCs can be kept lifelong and ready for multiple regenerative therapies in the future

iPSCs are key to a future functional cure for major diseases

## Who should do it?

Healthy Individuals of any age

Individuals with diabetes or other pre-existing conditions

Individuals with family history of disease

Anyone who cares about health preservation

# Why Bank Now?

## Youth = Quality

Cells deteriorate with age. Bank them now to lock them in at their peak health and vitality. Why wait?

## Bio Insurance against the unknown future

Your iPSCs could be the key to future cures for diabetes, cancer, degeneration or other diseases.

## Simple process, Life-long protection

From blood draw to stem cell storage, the entire process takes just 4-5 months with no disruption to your life. A cell banking certificate is provided to you at the end of the process.

# Why BetaLife?

## World-Class Expertise

BetaLife is a developer of regenerative medicine solutions for diabetes. Our background platform technology was co-developed and licensed from A\*STAR, ensuring the highest standards in iPSC generation and development.

## Precision Medicine for Your Future Health

We produce both research-grade and clinical-grade iPSCs, including iPSC-derived pancreatic islet cells and other cell types, which are the building blocks of a healthy body.
