

AN INVITATION TO ACT

Your Biology, preserved at its *finest hour.*

There is a narrow window in which your cells are at their peak - young, vital, and unburdened by the passage of time.

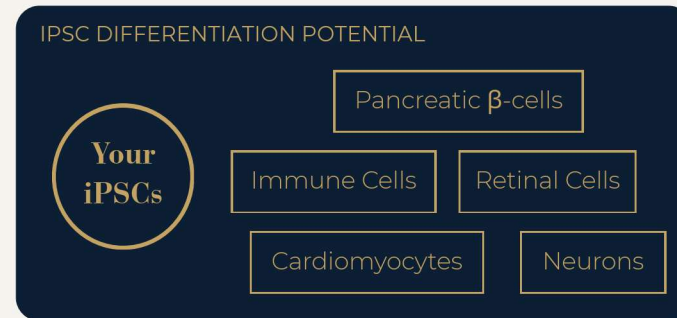

- INDUCED PLURIPOTENT STEM CELL BANKING

BETA Vault BY BETALIFE · SINGAPORE

THE SCIENCE

Why iPSCs are the cornerstone of tomorrow's medicine

Induced pluripotent stem cells (iPSCs) are reprogrammed from your own blood and can differentiate into virtually any cell type - giving future physicians a personalized, inexhaustible therapeutic toolkit.

THE REASON FOR BANKING NOW

- 01 Genetic Fidelity**
100% genetically identical to you - eliminating or reducing immune rejection risk in future therapies.
- 02 Age-Defying Preservation**
Cellular quality diminishes irreversibly with age. Banking today locks in your biological peak permanently.
- 03 Therapeutic Optionality**
Your banked cells remain ready for future therapies across diabetes, oncology, neurodegeneration, cardiovascular disease and beyond.
- 04 Precision Drug Profiling**
Drug screening calibrated to your unique biology, potentially sparing you from ineffective treatments.

WHO THIS IS FOR

*For those who understand that the **most valuable investment** is the one made before it becomes necessary.*

- Individuals committed to longevity & health sovereignty to safeguard their future
- Those with a personal or family history of diabetes, cancer, neurological or cardiovascular disease
- Executives and professionals seeking proactive precision healthcare
- Healthy individuals who wish to act from strength, not urgency

THE PROCESS

- CONSULTATION & CONSENT**
A confidential consultation with our team; documentation completed at your convenience.
- BLOOD DRAW & PATHOGEN SCREENING**
1 - 2 minimally invasive blood draws; selected viral pathogen screening before processing begins.
- IPSC GENERATION** *2-3 months*
Reprogrammed in our GMP-compliant facility to clinical-grade iPSCs.
- QUALITY ASSURANCE** *1-2 months*
Stringent quality control and certification before your cell line is cleared for storage.
- LIFELONG CRYOGENIC STORAGE**
Your certified cell line cryopreserved on fixed or renewable 10/15/20-year terms.

iPSC Generation & Processing

BetaVault by BetaLife is Singapore's premier iPSC cell banking service - anchored in science, designed for those who plan ahead.

Advanced Cryogenic Vault

iPSC banking refers to the generation and storage (biobanking) of personalized iPSCs, as a proactive “biological insurance”.

Your cells are stored in a Singapore-based, GMP-accredited facility with 24/7 cryogenic storage monitoring with restricted access and strict data privacy controls in place.

FREQUENTLY ASKED QUESTIONS

Is it safe?

Absolutely. The process requires only a standard blood draw. No surgery, no anaesthesia. Your samples are processed in a GMP-compliant accredited facility under strict clinical and cleanroom protocols.

Is there real evidence that iPSC-derived cells work?

Yes. Today, over 150 ongoing clinical trials are using iPSC-derived specialized cells to address various indications, including **cancer, spinal cord injury, diabetes, and age-related macular degeneration**. In February 2026, Japan's health ministry has endorsed issuing conditional approval for two iPSC-based therapies for **Parkinson's disease** and **heart failure**. iPSC technology is backed by decades of research work.

Why should I pay for this now?

Think of it as an investment in your future health, not an expense. Your cells will never be younger or healthier than they are today. By the time a therapy is needed, it may be too late to harvest high-quality material. Pre-banking ensures you are “trial-ready” the moment a breakthrough occurs and a relevant medical need arises.
